

Smart Interview Preparation Platform - Complete 30 Day Workbook

Day 1

Module: Project Setup

Tasks:

Install Node.js, VS Code, Git. Create client/server. Setup React(Vite) and Express.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

React and Express running.

Commit Example:

```
git commit -m "project setup completed"
```

Day 2

Module: Backend Configuration

Tasks:

Setup dotenv, CORS, nodemon. Configure Express app.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Clean backend structure.

Commit Example:

```
git commit -m "backend configuration completed"
```

Day 3

Module: MongoDB Atlas

Tasks:

Create Atlas cluster and connect with Mongoose.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Database connected.

Commit Example:

```
git commit -m "mongodb atlas completed"
```

Day 4

Module: Database Design

Tasks:

Create User, Interview, Result, Resume models.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Schemas ready.

Commit Example:

```
git commit -m "database design completed"
```

Day 5

Module: Register API

Tasks:

Create registration endpoint and validation.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

User registration works.

Commit Example:

```
git commit -m "register api completed"
```

Day 6

Module: Login API

Tasks:

JWT login and token generation.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Authentication works.

Commit Example:

```
git commit -m "login api completed"
```

Day 7

Module: Middleware

Tasks:

bcrypt hashing and auth middleware.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Protected routes ready.

Commit Example:

```
git commit -m "middleware completed"
```

Day 8

Module: Register UI

Tasks:

Build Register page and connect API.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Frontend registration works.

Commit Example:

```
git commit -m "register ui completed"
```

Day 9

Module: Login UI

Tasks:

Build Login page.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Frontend login works.

Commit Example:

```
git commit -m "login ui completed"
```

Day 10

Module: Auth Integration

Tasks:

Connect frontend and backend auth.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Complete auth flow.

Commit Example:

```
git commit -m "auth integration completed"
```

Day 11

Module: Dashboard Layout

Tasks:

Navbar, Sidebar, Dashboard.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Dashboard UI ready.

Commit Example:

```
git commit -m "dashboard layout completed"
```

Day 12

Module: Cloudinary

Tasks:

Configure Cloudinary account.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Cloud storage connected.

Commit Example:

```
git commit -m "cloudinary completed"
```

Day 13

Module: Multer

Tasks:

Setup file upload middleware.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

PDF uploads enabled.

Commit Example:

```
git commit -m "multer completed"
```

Day 14

Module: Resume Upload

Tasks:

Resume upload API and storage.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Resume saved.

Commit Example:

```
git commit -m "resume upload completed"
```

Day 15

Module: Interview Domains

Tasks:

Create selection page for JS, React, Node, MongoDB, MERN.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Domain selection works.

Commit Example:

```
git commit -m "interview domains completed"
```

Day 16

Module: OpenAI Setup

Tasks:

Create OpenAI service and env variables.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

AI service connected.

Commit Example:

```
git commit -m "openai setup completed"
```

Day 17

Module: Question Generation

Tasks:

Generate AI interview questions.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Questions returned.

Commit Example:

```
git commit -m "question generation completed"
```

Day 18

Module: Interview Screen

Tasks:

Display questions and answer fields.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Interview page ready.

Commit Example:

```
git commit -m "interview screen completed"
```

Day 19

Module: Answer Submission

Tasks:

Submit answers from frontend.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Answers stored.

Commit Example:

```
git commit -m "answer submission completed"
```

Day 20

Module: AI Evaluation

Tasks:

Evaluate answers using AI.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Scores generated.

Commit Example:

```
git commit -m "ai evaluation completed"
```

Day 21

Module: Result Storage

Tasks:

Store scores and feedback in MongoDB.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Results persisted.

Commit Example:

```
git commit -m "result storage completed"
```

Day 22

Module: Interview History

Tasks:

Create history page.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Past interviews visible.

Commit Example:

```
git commit -m "interview history completed"
```

Day 23

Module: Results Page

Tasks:

Show question, answer, score, feedback.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Result screen ready.

Commit Example:

```
git commit -m "results page completed"
```

Day 24

Module: Chart.js

Tasks:

Add score analytics chart.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Bar chart working.

Commit Example:

```
git commit -m "chart.js completed"
```

Day 25

Module: Analytics

Tasks:

Strength and weakness charts.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Analytics visible.

Commit Example:

```
git commit -m "analytics completed"
```

Day 26

Module: Weak Area Detection

Tasks:

Generate improvement suggestions.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Learning insights shown.

Commit Example:

```
git commit -m "weak area detection completed"
```

Day 27

Module: UX Improvements

Tasks:

Loading states and notifications.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Better UX.

Commit Example:

```
git commit -m "ux improvements completed"
```

Day 28

Module: Responsive Design

Tasks:

Mobile and tablet support.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Responsive UI ready.

Commit Example:

```
git commit -m "responsive design completed"
```

Day 29

Module: Deployment

Tasks:

Deploy frontend and backend.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Live URL available.

Commit Example:

```
git commit -m "deployment completed"
```

Day 30

Module: Finalization

Tasks:

README, screenshots, demo video, portfolio update.

Recommended Files:

Create/update relevant files in client/src and server folders for this module.

Deliverable:

Portfolio-ready project.

Commit Example:

```
git commit -m "finalization completed"
```
